Summary

Computer Science student with a strong interest in software development and AI Engineering. I enjoy designing practical projects, scalable systems, and creating software that turns data into meaningful insights.

Education

- BS EAFIT University**, Systems Engineer Medellin, Colombia
Pursuing a Bachelor's degree in Computer Science with a strong foundation in algorithms, data structures, operating systems, database systems, networking, cybersecurity, artificial intelligence, and software architecture. Jan 2024 – present
- Specialization on Artificial Intelligence and Data Engineering: because AI is transforming IT, while data drives innovation.
 - Member of Software Engineering Research Group, strengthening software development, collaborative teamwork, and software solution analysis skills.
- Colegio Tercer Milenio**, High School Caldas, Antioquia
• Computer Science Award: recognizing the highest achievement in computer science within the graduating class. Nov 2023
• Achieved a score of 366 on the Colombian ICFES Saber 11 national examination, ranking above 99% of test takers nationwide.

Projects

- Multi-Criteria Decision Making Project** Feb 2026 – June 2026
This project was developed by a team of five as part of a larger research initiative involving university professors and an industry partner. Our goal was to contribute a decision-support algorithm capable of identifying the most suitable locations for wind farm development in Colombia by considering multiple technical, environmental, social, and economic criteria.
- InmoFinder** July 2025 – Nov 2025
InmoFinder is an AI-powered real estate aggregation platform built by a team of four developers. It centralizes property listings from multiple websites into a single platform using web scraping to extract structured data, including property features, pricing, and images, making home searching faster and more efficient.
- NextStep** July 2025 – Nov 2025
NextStep is a gamified career platform developed by a team of four for a Magneto Empleos innovation challenge. The solution increases user engagement and profile completion through achievements, rewards, personalized notifications, and an AI-powered career assistant that supports users throughout their job search journey.

Skills

Programming languages: Python, JavaScript, C++, Java
Frameworks: Django, FastAPI, Flask, Node.JS, PyTorch, TensorFlow
Databases: PostgreSQL, MySQL, MongoDB,
Others: Docker, Git, AWS
Languages: Spanish, English
